

Since 2003

SABTA

GRANITE & MARBLES TRADING

Granite is the Miracle of Nature...

**We Welcome your steps towards the world of natural stone,
let us give opportunity to introduce you
world's best collection of Marble & Granite**

Who we are:

SABTA Granite is the most dependable source for exquisite range of Marble, Granite, Travertine, Sand Stone and Slate from Italy, Turkey, Spain, China, Brazil, Greece, Iran, Vietnam, Pakistan and India. Our presence in this country is for more than 15 years which has made us the driving force who believes delivering even the smallest of tolerances is beach of our promise. Thus the relentless faith and trust of all makes us the most preferred supplier to Architects, Designers and the Local Marble and Contracting Companies. To stand up to their expectations we find ourselves as a continuously evolving Brand.

We have all the facilities under one roof for processing of Tiles, Slabs, Cut to Sizes, Counter Tops, Steps, Risers, Skirting etc. And we can offer all our products in Polished, Honed, Flamed, Antique and Bush Hammered Finishes.

With our superior material selection, we can furnish quality stone at competitive prices. With our dedicated commitment to customer satisfaction by strict adherence to quality parameters and delivery schedules, we have successfully carved out a prominent role for ourselves in the local market.

It is our goal and tradition to continue to give our customers good quality materials at a competitive cost. After years of monitoring our facility, we have reached the most accurate pricing system; we are able to provide you with most cost efficient work.

The natural stone mined from these quarries is brought to life & presented by SABTA with its own UAE based facilities like cutting, finishing & water jet. Thus, SABTA is able to offer any stone, any size, and any thickness to suit every type of project. Numerous lavish projects have been executed over the last decade in & around UAE and various parts of the world with stone supplies from SABTA. The enormous variety, finishing & ability to supply large quantities are what has been SABTA's biggest assurance to domestic & international customers.

Our Mission

Our mission is to provide the best possible curated stone from nature granite and marble to enhance the design value of a project. Our yearning to eventually become the most admired, ethically and socially responsible brand is rooted in the adherence of the DOs and DON'Ts that are prescribed for the team that works towards customer satisfaction. We strive to build long term relationships based on mutual trust and respect. Our duty towards nature and its perishable minerals is perennial.

Our Vision

We aim to become a premier brand that understands and satisfies customers through quality products at fair prices with timely deliveries; a brand that evolves consistently; a market leader in our segment through sourcing of nature's best granite and marble. We also envision becoming an inspiring brand for competitors so the segment eventually progresses through competition and evolution.

"Choose the Natural Stone that best fits in your project from our wide selection."

Straight from quarries, the essence of fashion and trends in architecture and interior design is born. Discover the collection by SABTA and be inspired to experience fashion and design your World.

A color of symbolism

Marble is a metamorphic rock that forms when limestone is subjected to the heat and pressure of metamorphism. It is composed primarily of the mineral calcite (CaCO_3) and usually contains other minerals, such as clay minerals, micas, quartz, pyrite, iron oxides, and graphite. Under the conditions of metamorphism, the calcite in the limestone recrystallizes to form a rock that is a mass of interlocking calcite crystals. A related rock, dolomitic marble, is produced when dolostone is subjected to heat and pressure.

A modern living room with a white marble floor. In the foreground, a large, glossy white marble tile is reflected on the floor. In the background, there is a black and white egg-shaped chair, a coffee table, and a TV stand with a television and speakers. The room is lit with natural light from a window with grey curtains.

"As a natural product coming from inside earth, marble has natural variations in its pattern, in color tone, veins or crystals. To help you get a result, where there is absolute balance on the pattern matching among marble tiles fitted on floor or wall cladding, SABTA is offering you as option the "Dry Lay" service. For this scope we have created an in house exclusive area, which is secured and provides all necessary conditions for the successful implementation of marble Dry Laying Process."

ONYX

Onyx is the result of water dissolving existing limestone and re-depositing it as a new kind of stone, sometimes called sinter. In limestone caves, onyx is formed by drip water, as stalagmites and stalactites. Onyx is a very soft and somewhat brittle stone, and needs to be installed where it will not be subject to hard wear. This beautiful stone is characterized by its translucence, and can actually be backlit for striking, dramatic effects.

A large-scale granite quarry operation. In the foreground, a massive, detailed granite head is carved into the rock face, showing intricate features like the eye and nose. The background shows a vast, terraced quarry with numerous vertical lines from drilling and extraction, set against a clear blue sky.

"To explore all possibilities that natural stone has to offer, you need the right partner with mindset and capacity to support your inspiration without limitations.

At SABTA we know how to work with natural stone in order to maximize its overall value for your project's benefit and success. We are equipped with well trained work force, specialized machinery that can shape marble in any form according to architect's imagination, and we have the scalability to support any size of project."

GRANITE

Granite is a light-colored igneous rock with grains large enough to be visible with the unaided eye. It forms from the slow crystallization of magma below Earth's surface. Granite is composed mainly of quartz and feldspar with minor amounts of mica, amphiboles, and other minerals. This mineral composition usually gives granite a red, pink, gray, or white color with dark mineral grains visible throughout the rock.

"Stupidity is something unshakable; nothing attacks it without breaking itself against it; it is of the nature of granite, hard and resistant."
- Gustave Flaubert -

" The first four months of writing the book, my mental image is scratching with my hands through granite. My other image is pushing a train up the mountain, and it's icy, and I'm in bare feet. "

- Mary Higgins Clark -

TRAVERTINE

Travertine is generally used for floors, walls, countertops and for outside as cladding and pavement. In its original form, travertine has many holes and voids that are generally filled with grout and then honed or polished, which produces a uniform surface more like other marbles. Unfilled travertine is also quite beautiful, and is often seen as exterior surfaces of buildings. Travertine stones result from hot spring water penetrating up through underground limestone. After water evaporates, it leaves layers of dissolved limestone and other minerals, giving it its banded appearance. Travertine stones are generally light-colored beiges and tans.

Founded in 2003, we combine strong heritage and expertise in natural stone with fresh approach and innovative thinking.

Having been born out of a strong marble background, we have been raised to love natural stone, respect its nature, listen to you and your needs, care for solutions and take actions to deliver results with quality and commitment. Our flexibility to provide you with tailor made solutions, profound know how, state of the art Machinery and Specialized human capital are our warranties for successful results."

Limestone is sedimentary rock consisting mostly of organic material such as skeletons and shells of marine creatures and sediments. It is formed by material which settles to the bottom of bodies of water, and over millions of years, solidifies (lithifies) into solid rock. It is a great material for bathrooms and fireplace surrounds because of the warm, rich look it provides.

LIMESTONE

AT SABTA, care for marble and attention to quality are among our highest priorities. Therefore, we are continuously investing in technology, know-how and human expertise.

We ensure that the entire workflow from elaboration, packaging, transportation and export can't be interrupted by exterior factors which gives us unexpectedly fast delivery procedures.

SANDSTONE

Any sedimentary rock composed of stony grains between 1/16 mm and 2 mm in diameter that are cemented together is a sandstone.

Sandstone forms from beds of sand laid down under the sea or in low-lying areas on the continents. As a bed of sand subsides into the earth's crust, usually pressed down by over-lying sediments, it is heated and compressed. Hot water flows slowly through the spaces between the sand grains, importing dissolved minerals such as quartz, calcium carbonate, and iron oxide. These minerals crystallize around the sand grains and cement them together into a sandstone. Spaces remain between the grains, resulting in a porous, spongelike matrix through which liquids can flow.

" The block of granite which was an obstacle in the pathway of the weak, became a stepping-stone in the pathway of the strong."

- Thomas Carlyle -

SLATE

Slate is a fine-grained, foliated metamorphic rock that is created by the alteration of shale or mudstone by low-grade regional metamorphism. It is popular for a wide variety of uses such as roofing, flooring, and flagging because of its durability and attractive appearance.
